SPORTS WORLD

The sports world is an application that brings together companies that want to sell sports products and customers who want to supply sports products. The main purpose is to bring the company and the customer together on the same portal.

First, a flowchart should be made. Because seeing the processes visually will be beneficial for our project speed.

The data required for sports world must be entered into the database system. Therefore, database diagram has been created on excel.

In the "Sports World" app;

- A login screen will be made.
- Before logging in with email and password, a registration system will be created. There should be a part where the user information is taken and the customer or company is determined.
- A system will be organized in which the product can be selected among the categories and communicate with the customer.
- Areas such as communicating with customers, adding products and seeing their sales should be created under supplier membership.
- An area should be created where the customer can select their products, view their orders, and communicate with the company.
- And the last step of the sale, the payment part, must be in the system.

Application should be developed with these criteria.
